Preface

The Asset Standards Authority (ASA) is an independent unit within Transport for NSW (TfNSW) and is the network design and standards authority for defined NSW transport assets.

The ASA is responsible for developing engineering governance frameworks to support industry delivery in the assurance of design, safety, integrity, construction, and commissioning of transport assets for the whole asset life cycle. In order to achieve this, the ASA effectively discharges obligations as the authority for various technical, process, and planning matters across the asset life cycle.

The ASA collaborates with industry using stakeholder engagement activities to assist in achieving its mission. These activities help align the ASA to broader government expectations of making it clearer, simpler, and more attractive to do business within the NSW transport industry, allowing the supply chain to deliver safe, efficient, and competent transport services.

The ASA develops, maintains, controls, and publishes a suite of standards and other documentation for transport assets of TfNSW. Further, the ASA ensures that these standards are performance based to create opportunities for innovation and improve access to a broader competitive supply chain.

This Train Operating Conditions (TOC) manual is published by the ASA to provide an update from the December 2013 issue of the TOC manual.

This TOC manual aims to provide a single reference and technical guidance for train operations on the RailCorp Network.

The content, information, and data within this TOC manual are derived from updates since the last edition of 20 December 2013. The information is compiled from a number of sources. The ASA performs limited validation of this information as it is deemed to be sourced from competent organisations.

This December 2014 issue of the TOC manual comprises three parts as follows:

- TS TOC.1: 2014 issue 1
- TS TOC.2: 2014 issue 1; this document
- TS TOC.3: 2014 issue 1

As the ASA continues to evolve, future iterations of the TOC Manual and the information contained within it may be made available in different formats and delivery mechanisms to facilitate ease of access and usability.

Introduction

This Document contains the Division pages of the Train Operating Conditions (TOC) Manual, which shall be read in conjunction with the relevant standard working timetables for the purpose of safe train operations and is applicable to all freight, passenger, and infrastructure maintenance operations on the RailCorp network.

The December 2014 issue of the TOC Manual comprises three parts:

- TS TOC.1: 2014 issue 1 *Train Operating Conditions (TOC) Manual – General Instructions*
- TS TOC.2: 2014 issue 1 *Train Operating Conditions (TOC) Manual – Division Pages*; this document
- TS TOC.3: 2014 issue 1 *Train Operating Conditions (TOC) Manual – Track Diagrams*

This document, TS TOC.2: 2014 issue 1, *Train Operating Conditions (TOC) Manual – Division Pages*, contains the following:

- Northern Division Pages
- Western Division Pages
- Illawarra Division Pages
- Sydney Metropolitan Area Division Pages
- Passenger Train Operating Condition Pages
- Coal Working Pages

TS TOC.1: 2014 issue 1, *Train Operating Conditions (TOC) Manual – General Instructions*, contains the following:

- General Instruction Pages

TS TOC.3: 2014 issue 1, *Train Operating Conditions (TOC) Manual – Track Diagrams* contains the following:

- Track Diagrams

Purpose

The TOC Manual specifies conditions for the operation of trains and rolling stock on the RailCorp network.

Scope

The TOC Manual describes the network, defines operating conditions for trains and rolling stock and lists all rolling stock authorised to operate on the RailCorp network. The RailCorp network is bounded by Newcastle (163.981 and 164.045 km), Bomaderry (153.630 km), Unanderra (91.080 km), Macarthur (57.965 km), and Bowenfels (158.800 km) but does not include the Metropolitan Freight network.

Application

The TOC Manual is to be used by train planners, train timetablers, train control personnel, and train crews, and shall be read in conjunction with the relevant Safeworking rules and procedures.

Summary of changes

Table 1 provides a summary of changes to the content of this section of the manual since its previous publication. Changes to front matter, formatting, branding and governance are not included.

Table 1 Summary of changes from 1 August 2013 ASA edition

Page	Section	Change
Northern Division		
Western Division		
29	DOWN loads	Added rows with "#" identifier as per TW 204-045
29	DOWN - sectional running times and full sectional loads	Changed C1 sectional running times for Valley Heights, Lawson, Mt Victoria, and Zig Zag as per TW 204-201
Illawarra Division		

Page	Section	Change
47	Location of speed signs - Unanderra to Bomaderry	Amended 141.720, added 140.760 and 141.200
47	Location of speed signs - Unanderra to Bomaderry	Added entry for 108.887 – Shellharbour Junction
52	UP – 91.080 km to Unanderra – Explanatory Notes	Removed " xx" from first paragraph of Note 2 – Two Pipe Trains
Sydney Metropolitan		
58	Maximum speed of locomotives and rolling stock - Sydney Metropolitan Area	Added SSR, CM, MRL, and FIE to the table header for the ^2 column. Added Leppington.
61	Sydney Metropolitan Area - sectional freight loads	Added Leppington.
63	Hours of signal boxes	Changed hours of duty for entry for Freight Lines
70	Section 2d Homebush – St Marys	Modified entry 24.800
72	Section 5a Lidcombe - Macarthur	Casula to Macquarie Fields – updated speeds.
73	Section 7a Strathfield – Hornsby	Changed entry 23.135 from 60/60/60 to 50/60/60
74	Section 7c West Ryde – Epping Suburban Lines	Changed entry 23.206 from 60/60/60 to 50/60/60
75	Section 9 Sutherland - Cronulla	Added new entry 34.445 on down line
76	Section 12 Central – Wollie Creek (Airport Line)	Fixed heading repeat problem, and modified entry 0.100 – Central to 0.000 – Central
78	Section 14g Metropolitan Freight Lines	Altered entries (9)15.925, 16.020, and 16.330
78	Section 15 Glenfield - Leppington	Added table
78	Section 15a Glenfield – Leppington (Loop Lines)	Added table
Passenger Train Operating Conditions		
80	Table 4 - Maximum speed of Sydney Trains and NSW Trainlink rolling stock	Added Leppington
85	7b - Transfer of Extended Medium Width rolling stock between Sydney and the Newcastle area	Changed text "Gosford, Wyong, Fassifern, Cardiff, and Broadmeadow." from heading to bold text destinations

Format of division pages - explanation

Version 2.0 December 2008

Item	Label	Description
Item 1	Divisions	The Train Operating Conditional Manual comprises the Western, Northern and Illawarra and Metropolitan Divisions. Each section provides the condition for operation of locomotives and rolling stock.
Item 2	Classification of track	The class of track will affect the speed and types of locomotives and rolling stock authorised to run over the various sections.
Item 3	Maximum speed of locomotives	Identifies locomotives and maximum speeds approved for that section of track. The letters N/A indicate these locomotives are not approved to run over this section of track.
	Operation of unlisted locomotives	Refer to the Asset Standards Authority for authorisation.
Item 4	Multiple locomotive working	The columns associated with locomotives headed "MULTIPLE LOCOS" shows the maximum number of locomotives powering that may run coupled together in a locomotive group on each relevant section of track. Up to a maximum of 5 locomotives total can be marshalled together in any locomotive group attached to a train. However, the number of locomotives that can be powering within each locomotive group at any given time is indicated in the multiple working section on the respective MAXIMUM SPEED OF LOCOMOTIVES AND ROLLING STOCK page.
Item 5	Classification of freight vehicles	Identifies freight vehicle class and maximum speeds approved for that section of track. The letters N/A indicate these vehicles are not approved to run over this section of track.
	Operation of unlisted freight vehicles	Refer to the Asset Standards Authority for authorisation.
Item 6	Classification of passenger vehicles	Identifies passenger vehicles and maximum speeds approved for that section of track. The letters N/A indicate these vehicles are not approved to run over this section of track.
	Operation of unlisted passenger rolling stock	The grouping Diesel Railcars includes #self propelled diesel trains and Rail Motors. #Refer to Sydney Trains & NSW Trainlink pages for Endeavour/Hunter railcar approval.
Item 7	Safeworking systems	This section indicates the safeworking system and the area controlled by that system. When words 'Yard Working' appear, the nominated section of track will be worked in accordance with the instructions contained in Sydney Trains Network Rule <i>NTR 418 Yard limits</i> .
Item 8	Line map	See list page 1 for details.
Item 9	Private line/siding	A Private (Non RailCorp owned) Line/Siding represented in the Section Pages(Line Map) by "P" is one that is not owned by RailCorp and therefore will not necessarily have operating conditions published in this Manual. Where this Manual contains information relating to the operating conditions for a private Line/siding, that information is published with the agreement or at the request of the owner/operator of that Line/siding. For the purpose of train control, to and from a private Line/siding, the operator in securing a train path on the RailCorp Network, has certified that there is an interface understanding/agreement between the operator and the owner/operator of the private Line/siding, which authorises the train/vehicles to operate within the confines of the private Line/siding. In providing an agreed train path in accordance with the operations protocol, Sydney Trains has certified that the operator's train will be accepted from or delivered to the boundary of the private Line/siding nominated in the operator's train path application.

PAGE LAYOUT TOC 2 v3.0

Where can locomotives run?

Version 2.0 December 2008

Where can locomotives run?
Full Sectional Loads & Schedules
Running times

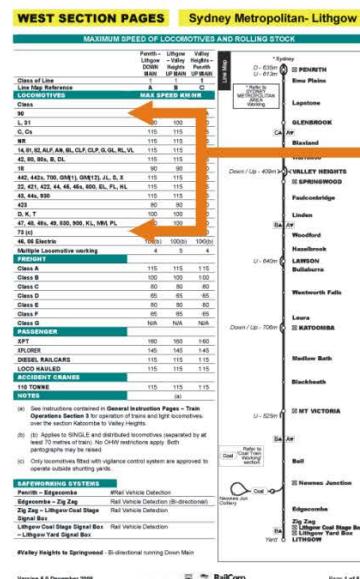

The LOAD (L) category is determined by referring to the General Instruction Pages - SECTION 10 Locomotives and Rolling Stock Data or the table shown in SECTION 2 Locomotive Operations.

Where can locomotives run?
Where locomotives can run is indicated in the **MAXIMUM SPEED OF LOCOMOTIVES AND ROLLING STOCK** table located on the first page of the various subsections of each region.
When a speed is shown this is the authorisation for that category of locomotive to operate. Where the letters N/A appear that category of locomotive is not approved to operate.

Australia Southern Railroad (A.R.G.) - Locomotives

CODE	LOAD	CATEGORY	DESCRIPTION OF VEHICLE	MAX SPEED 1m/h	LIVE WEIGHT TONNES	LENGTH	DRAW COUPLING FACES (m)	HORSE POWER MN	REMARKS
CLC	L6	Diesel	115	128	20,498	180	3000		
CLP	L6	Diesel	115	128	20,498	180	3000		
GM(12)	L12	Diesel	115	115.3	18,542	0.90	1800		
22	L10	Diesel	115	110	18,440	1.80	2000		
31	L5	Diesel	100	137	20,220	1.80	3000		Ex L class. Note m applies

Schedules
Schedule loads are set so that the train can operate within a preferred timetable. They are normally set lighter than the Full Sectional Load so that full advantage can be taken of the high power to weight ratio.

LOCOS	SECTIONS	LOCO-MOTIVE CLASS = L	LOAD - TONNES				TRAIN DATA

DUNMORE	6	7	9	

Section timing points.
Stations in capitals are staff stations,
lower case stations are intermediate locations.

Running Times
Sectional running times are related to the LOADS & CONDITIONS tables.
Times listed with an 'a' (e.g. 8a) are arrival times i.e. time is allowed to stop from the previous station and starting time is allowed towards the next station.
All other times are passing times. In columns where there are no running times and only two dots ... appear the next running time shown beneath the dots will be the total running time.
When a train is required to stop at a location that has passing times, then add ONE minute to that locations passing time, then add a further TWO minutes into the next section.

3. Find 1.80 in Trailing Tonnage table.

4. This figure 7196 tonnes indicates trailing tonnage permitted behind a MGFH over the section.

MAXIMUM LENGTH OF TRAINS / BRAKE TYPE

1. The length of a train is the overall length of a train including all locomotives whether powering, off line, dead attached or banking. The train must also be covered by an access agreement between RailCorp and the Operator, which indicates the trains **maximum length, motive power and maximum speed**. The maximum length of trains also depends upon **draw capacity** (see HOW TO DETERMINE DRAW CAPACITY TONNAGE table) and the **brake equipment type** (see Step 2) that is fitted to the vehicles.

2. Reference must be made to the LOCOMOTIVE AND ROLLING STOCK DATA pages to determine the brake type (i.e. B1, B2, B3 or B4). If no brake type is listed then assume B1 type. When a train is being marshalled at its point of origin, remarshalled or has vehicles attached en route the brake type list must be checked to ensure limits are not exceeded.

Manildra Flour – Freight Rolling Stock

CODE	DESCRIPTION	CLASS	MAX GROSS MASS	TARE TONNES	LENGTH METRES	DRAW CAPACITY MN	BRAKE TYPE	NOTES See below
MGFH	Grain hopper	C	100	26.5	17.6	1.80	B4	1-4 <i>c</i>

Brake type	Allowable vehicle position in train
B1	Any position in the first 900 metres of train
B2 & B3	Any position in the first 1500 metres of train
B4	Any position in train
E1	Any position in train (all locomotives and wagons ECP braked)

3. Check this table to determine the allowable position of the vehicles in a train

NOTES

- (a) When operating light 90 or TT class locomotives between Woodville Junction and Enfield, see Special conditions Page 26 of this section.
- (b) NR locomotive maximum speed of 40 km/h through Boronia Tunnel No 3 (Down and Up) 54.300km to 54.500km.
- (c) Woodville Junction to Hamilton Junction ONLY
- (d) Applies to SINGLE and distributed locomotives (separated by at least 70 metres of train). No OHW restrictions apply. Both pantographs may be raised.
- (e) Only locomotives fitted with vigilance control system are approved to operate outside shunting yards
- (f) Maximum speed of 40 km/h (Down and Up) when 90 class locomotives or 'G' class vehicles cross the bridge at 160.300km (Northcott Drive) between Kotara and Adamstown

Advisory speed signs

Special advisory speed signs have been positioned approaching signals at the locations shown below. Drivers of trains (except XPT's / Xplorer, Endeavour, Hunter trains and EMU's) are required to regulate the speed of their train at such locations to ensure that before reaching the signal indicated the speed is not in excess of that figure shown on the special advisory sign. If at any point approaching the signal it is seen to be exhibiting a full clear indication, normal track speed for the train concerned may be resumed.

Location	Signal number	Speed shown on sign
141.540 km	Fassifern No 48 Down Home, Main (88.1)	60
142.145 km	Fassifern Down Second Home, Main (88.5)	60

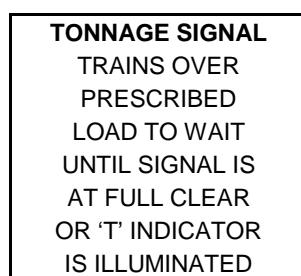

Tonnage signals

Certain signals listed herein are treated as **Tonnage Signals**, that is to say, in order to avoid the risk of trains over a certain tonnage being brought to a stand at signals where it would be difficult for them to restart, these tonnage signals shall not be passed by trains conveying loads in excess of 75% of the prescribed load (i.e. 75% of Full Sectional Load) unless the Tonnage signal is in the clear position (or by telephone instructions in the case of failure)

The following signals are to be treated as a Tonnage signal, in accordance with Sydney Trains Network Rule NSG 608 *Passing signal at STOP*.

Kilometrage	Signal number	Section located
Refer to Sydney Metropolitan Section		
Tonnage signals (page 64) for Tonnage Signals between Sydney and Hornsby		
57.290	# 146	Hawkesbury River
57.295	# 148	Hawkesbury River
57.300	# 150	Hawkesbury River
57.420	# 148 Repeater	Hawkesbury River
65.804	40.9	Wondabyne – Woy Woy
126.900	78.8	Dora Creek – Morisset
128.420	79.9	Dora Creek – Awaba

The signals at Hawkesbury River are fitted with a notice plate which reads as follows:

Transfer of 90, TT, 5000 and 5020 class locomotives Woodville Junction – Enfield/Chullora and return for wheel lathe attention or maintenance

90, TT, 5000 and 5020 Class locomotives may be transferred from Woodville Junction to Enfield or Chullora and return for wheel lathe attention or maintenance **as a light locomotive movement in each direction** subject to the following conditions:

1. Single or multiple 90/TT class locomotives are permitted, or a 90/TT class locomotive can be transferred in multiple with any other Pacific National locomotive.
2. Single or multiple 5000/5020 class locomotives shall be hauled dead attached by 423 and/or 6000 class locomotives. The mass of the 5000/5020 class locomotives shall not exceed 167 tonnes.
3. The axle loads are to be decreased by ensuring the locomotive has a reduced fuel load. (Do not fill fuel tank prior to transfer.)
4. The locomotives shall reduce its speed to **20 km/h** when traversing the following bridges:
 - **Main North:** 12.628 km (Parramatta Rd.)
 - **Bankstown Line:** 19.202 km
 - In addition, the speed of **5000/5020** class locomotives shall be reduced to **40 km/h** when traversing the following bridge:
 - **Main North:** 160.300 km (Kotara – Northcott Drive)
5. **Maximum track speed:**

	90/TT class	5000/5020 class
Woodville Junction – Vales Point Junction – Woodville Junction	60 km/h	50 km/h
Enfield – Vales Point Junction – Enfield	50 km/h	45 km/h
6. Sector Civil Engineers to be advised at least 48 hours in advance.
7. Transfer of these locomotives from **Woodville Junction to Enfield/Chullora** are to be done under block working conditions as per *NSY 512 Manual block working*.

Transfer of these locomotives from **Enfield/Chullora to Woodville Junction** shall be blocked worked where specified in the *General Instruction Pages of the Train Operating Conditions Manual, Locomotive Operations*.

% Additional one minute to be added when traversing the Up Main between Seven Hills and Westmead.

Assisting Lithgow to Zig Zag

December 2013

The assist locomotive can be marshalled either on the front or on the rear of the train depending upon operational requirements and vehicle gross masses in the trailing 1/3 of the train mass as outlined in General Instruction Pages, Section 2 Locomotive Operations, Assisting (banking) locomotives.

When trains are **assisted in the lead** from Lithgow, the assist locomotives are to remain on the train until it arrives at Mt. Victoria. This is to avoid the situation of removing the assist locomotives from the train at Zig Zag whilst a portion of the train is still on the rising 1 in 40 grade.

When trains are **assisted in the rear** from Lithgow, bank locomotive traction motor currents shall not exceed 250 amps on diesel locomotives, until all the bank locomotives are on the Main line and completely clear of the crossovers in Lithgow yard.

Bank Locomotive working between Lithgow Coal Stage and Zig Zag is to be carried out as outlined in Sydney Trains Network Local Appendices NLA 218 *Lithgow*.

Tonnage signals

Version 10.0 December 2012

Certain signals listed herein are treated as **Tonnage Signals**, that is to say, in order to avoid the risk of trains over a certain tonnage being brought to a stand at signals where it would be difficult for them to restart, these tonnage signals shall not be passed by trains conveying loads in excess of 75% of the prescribed load unless the Tonnage signal is in the clear position (or by telephone instructions in the case of failure)

The following signals are to be treated as a Tonnage signal, in accordance with Sydney Trains Network Rule NSG 608 *Passing signal at STOP.*

Kilometrage	Signal Number	Section located
77.500	SD 21 Valley Heights	Valley Heights – Springwood
77.574	SD 23 Valley Heights	Valley Heights – Springwood
93.331	58.1	Springwood - Lawson

Freight train braking requirements

Version 10.0 December 2012

Superseded by STOC 2 V30

Conditions for freight trains – Down direction

- (a) Ballast and work trains, with less than 80% of vehicles fitted with fixed exhaust chokes, operating from the Metropolitan area beyond Valley Heights and terminating before Lithgow then returning **LOADED** to the Metropolitan area are required to have a HP grade inspection carried out on the train.

Conditions for freight trains – Up direction

The following conditions apply to loaded freight trains operating between Katoomba and Valley Heights:

- (a) Braking requirements
- (1) Unless at least 80% of the train mass is fitted with approved fixed exhaust chokes, freight trains are required to have a HP grade inspection.
 - (2) Grade control valves (where fitted) are to be set in the IP position at the inspection location or other approved location.
 - (3) Dynamic / Regenerative brake shall be used if available.
 - (4) Maximum length of train with single piped vehicles is **1100 metres**.
 - (5) A HP grade inspection does not apply to ECP braked trains.

Refer also to General Instruction Pages – Section 3 Train Operations.

NOTES

- (a) NR locomotives restricted to operate between Unanderra and Dunmore.
- (b) Applies to SINGLE and distributed locomotive (separated by at least 70 metres of train). No OHW restrictions apply. Both pantographs may be raised.
- (c) Unanderra to Kiama only.
- (d) Only locomotives fitted with vigilance control system are approved to operate outside shunting yards..
- (e) These locomotives and freight vehicles when loaded to axle loads greater than 22 tonnes are NOT permitted to use Berry Perway Siding.

Notes:

1. Empty ballast train.
2. Includes Inner Harbour
3. Includes Unanderra

4. C3 Schedule Additional running time between Kiama – Berry – Bomaderry when conveying 100 tonne MGFH and NGXH vehicles. Only the following locomotive classes are permitted for the conveying of 100 tonne MGFH and NGXH vehicles: GWA, LDP, LDP10, SCT, TT, TT100, WH, 81, GL, CLF, CLP, 82, 31, L, LQ, LZ. A 50km/h speed restriction applies between 121.000 km and 125.000km (due to track restrictions).

\$ Trains conveying D classification vehicles to run to C Schedule without loss of time.

For other Sydney Metropolitan area running times, refer to diagram in the 'Sydney Metropolitan Division Pages' Sydney Metropolitan Area - freight and locomotive running times

Refer to table for loads. Where only one figure is shown e.g. **1** this represents the Down and Up load. Where two figures are shown the first figure represents the Down load and the second figure represents the Up load e.g. **[3/5]**. This table does not give the authority for all classes of locomotives to run on all sections of line. Refer to MAXIMUM SPEED OF LOCOMOTIVES AND ROLLING STOCK table for authority to run on each section

Map details:

- To Sydney: Wollongong (1), Coniston (1/4), Lysaghts (3), Unanderra (2), Pt Kembla North (1), Pt Kembla (2).
- To Moss Vale: Wollongong (1), Coniston (2), Lysaghts (3), Unanderra (2), Pt Kembla North (1), Pt Kembla (2).
- To Bomaderry: Wollongong (1), Coniston (2), Lysaghts (3), Unanderra (2), Pt Kembla North (1), Pt Kembla (2).
- Inner Harbour: A branch line connecting Coniston, Lysaghts, and Unanderra.
- Unanderra to Inner Hbr: # Unanderra to Inner Hbr
- Inner Hbr to Unanderra: * Inner Hbr to Unanderra
- Unanderra to Lysaghts: > Unanderra to Lysaghts
- Lysaghts to Unanderra: < Lysaghts to Unanderra
- Pt Kembla North to Pt Kembla: 1 → Pt Kembla Yard

August 2012

Local area Sectional Running Times

KEY:

- To Sydney: Wollongong (2/2)
- To Moss Vale: To Moss Vale (1/1)
- To Bomaderry: To Bomaderry (1/1)
- Coniston: Coniston (5/7/5)
- Inner Harbour: Inner Harbour (11/8/5)
- Lysaghts: Lysaghts (3/2/2)
- Unanderra: Unanderra (5/5/4)
- Unanderra Nth Jun: Unanderra Nth Jun (4/3/3)

- Pt Kembla: Pt Kembla (3/3/3)
- Cringila: Cringila (2/2/2)
- Pt Kembla Yard: Pt Kembla Yard (1/1/1)

Legend:

- Down full sectional load running times
- Up full sectional load running times
- Loco running times
- Arrow indicates Down direction (for this map only)
- Running times indicated between dots
- Passing times. (Square box)
- Add one minute to next section when starting, and an additional minute into terminating stations running time.
- Arrival/departure times. (Rounded box)
- Starting and terminating running time included. i.e. additional time for starting and terminating included. Black dot indicates location.
- Non electrified lines

Location of speed signs

Emergency working or diversion of container trains Tempe – Unanderra (en-route to and from Moss Vale)

The operation of container trains, on the UP and DOWN tracks between Unanderra and Tempe, (en-route to and from Moss Vale), shall comply with the following special working conditions.

These conditions shall apply to all container trains because of the potential for any vehicle in the consist to be loaded to the maximum allowable height above rail of 4050 mm, as published in the *TOC manual General Instructions, Section 5 Loading Restrictions* covering vehicles subject to Note R10.

As the UP and DOWN tracks between Tempe and Unanderra are presently only authorised for container traffic operating to a maximum height of 3916 mm above rail, all trains conveying container traffic shall operate as an out of gauge train. Note that this gauge infringement is in height only and does not affect passing traffic.

Therefore the following operating conditions shall apply:

- A maximum speed limit of **15 km/h** is imposed on all tunnels between Unanderra and Tempe.
- The speed limit shall apply for the full length of the train (excluding locomotives).
- Train to run to Schedule A1 shown on *DOWN - sectional running times and full sectional loads* (page 41) *UP - sectional running times and full sectional loads* (page 43).

Train Control is to ensure that crews operating the relevant container trains on this route are aware of the above conditions of operation.

UP – 91.080 km to Unanderra – Explanatory Notes

Superseded by
STOC 2 v3.0

Note 1 – Single Pipe Trains:

On steeply falling grades between 91.080 km and Unanderra loads for single pipe trains are limited due to air brake capacity to a **maximum load of 2400 tonnes**. The combination of loaded and empty vehicles in a train shall not exceed that listed in the table below. For multipack/articulated vehicles the number of platforms shall be counted instead of vehicles; i.e. an RRAY 5 pack shall count as 5 vehicles.

For trains over 2400 tonnes see section **Operation of Single Pipe Trains in Excess of 2400 tonnes and up to 1500 metres long from Summit Tank to Unanderra** on page 53.

Loaded Vehicles	Maximum empties	Loaded Vehicles	Maximum empties	Loaded Vehicles	Maximum empties
0	45	12	29	24	14
1	43	13	28	25	12
2	42	14	27	26	11
3	41	15	25	27	10
4	39	16	24	28	9
5	38	17	23	29	7
6	37	18	21	30	6
7	36	19	20	31	5
8	34	20	19	32	3
9	33	21	18	33	3
10	32	22	16	34	1
11	30	23	15	35	0

Note 2 – Two Pipe Trains:

Two pipe vehicles have a main reservoir that recharges the air brake system. These vehicles listed in the General Instruction Pages, **Section 10 Locomotive and Rolling Stock Data** and are identified by **••** in the Brake Type column.

The maximum train length of two pipe vehicles on a train is 46 vehicles. Up to 6 empty or loaded single pipe vehicles may be attached to the **REAR** of a loaded or empty two pipe train. The two pipe portion shall not exceed 40 wagons.

Note 3 – ECP Braked Trains:

The maximum train length of trains operating under ECP brakes is 46 vehicles. This is the approved load for ECP trains operating from the western coal fields.

Note 4 – Pressure Maintaining Brake Valves:

Lead locomotives on freight trains operating from 91.080 km to Unanderra should have pressure maintaining brake valves (26L brake equipment or equivalent).

Where the lead locomotive is not fitted with a pressure maintaining brake valve, and the train is to be held stationary on the grade for periods in excess of ten (10) minutes, handbrakes shall be applied in accordance with the requirements in the **General Instructions Pages, Section 3 train Operations, Holding a train stationary on a grade.**

Conditions of Operation of Freight trains - Unanderra and 91.080 km (en-route to and from Moss Vale)

Superseded by
TOC 2 v3.0

Braking Requirements – DOWN direction:

- Freight trains with grade control valves are required to have a HP grade inspection carried out on the train.
- Grade control valves are to be set in the **EX position**.

Braking Requirements – UP direction:

- Unless at least 80% of the train mass is fitted with fixed exhaust chokes, freight trains are required to have a HP grade inspection carried out on the train.
- Grade control valves (where fitted) are to be set in the **IP position** at the inspection location or other approved location.
- Dynamic brake shall be used if available.

Operation of Single Pipe Trains in Excess of 2400 tonnes and up to 1500 metres long from Summit Tank to Unanderra

Single pipe trains between **2400 and 4000 tonnes and up to 1500 metres long** may operate from the **ARTC/RailCorp boundary** to Unanderra under mandatory dynamic brake conditions as follows:

- these trains shall have a HP grade Inspection and grade control valves set in 'IP'
- the minimum allowable vehicle mass for vehicles in the front third of a train shall not be less than 215 tonnes. In the case of multipack vehicles the minimum allowable vehicle mass shall be the gross mass divided by the number of platforms (decks).
- there shall not be any empty platforms (decks)
- maximum train length 1500 metres plus locomotives.
- maximum train mass 4000 tonnes plus locomotives.
- train shall have three (3) locomotives at the front of the train and up to two (2) locomotives at the rear of the train from the **ARTC/RailCorp boundary** to Unanderra.
- one locomotive shall be provided for each 800 tonnes or part thereof of train load.
- all locomotives shall have operable extended range dynamic brake and a minimum mass of 129 tones.

- the speed of the train shall be controlled by dynamic brake supplemented by use of air brake as required
- the speed of the train shall not exceed 25 km/h
- Crews shall have clear understanding of procedures for operating these trains in the event of loss of radio communication

If the dynamic brake fails on one locomotive only after departing the ARTC/RailCorp boundary the train may continue under the control of the remaining dynamic brake and supplemented by the air brake.

- If the driver has any trouble in adequately recharging the brake pipe, the train shall be brought to a stand and held on the locomotive independent brake and sufficient handbrakes and the brake pipe fully recharged.
- The grade control valves shall be placed in the "**HP**" position.
- The train may then continue under the control of the remaining dynamic brake and supplemented by the air brake.
- If the driver again has trouble in adequately recharging the brake pipe, the train shall be brought to a stand and secured by handbrakes.
- The train may be subsequently moved only by dividing the train or attaching additional locomotive/s with operable dynamic brake.

If the dynamic brake fails on more than one locomotive only after departing the ARTC/RailCorp boundary the train shall be brought to a stand and secured by hand brakes. The train may be subsequently moved only by dividing the train or attaching additional locomotive/s with operable dynamic brake.

- If the train is required to be divided as above, each portion of the train shall comply with the single pipe train load and length limits as specified in Note 1 above.

Conditions for the Operation of Self Propelled Diesel trains - Unanderra and 91.080 km (en-route to and from Moss Vale)

✓	✓	No brake cut outs permitted
✓	✓	Electro-pneumatic (EP) brake, automatic brake, hand and all spring parking brakes fully operational

XPT	Xplorer, Endeavour	Conditions of Operation – UP Direction
✓	--	One or two power cars operating
✓	--	All engines operating
--	✓	At least half of traction motors working. Single car not permitted.
✓	--	Maximum 7 trainers with 2 power cars or 3 trailer cars with 1 power car
✓	✓	All compressors operating (compressor on any dead power car to be switched to hotel supply)
✓	✓	Emergency coupler available
✓	✓	No brake cut outs permitted
✓	✓	Electro-pneumatic (EP) brake, automatic brake, hand and all spring parking brakes fully operational

For note details, see notes on page 60, 'Notes for Maximum speed of locomotives and rolling stock - Sydney Metropolitan Area'.

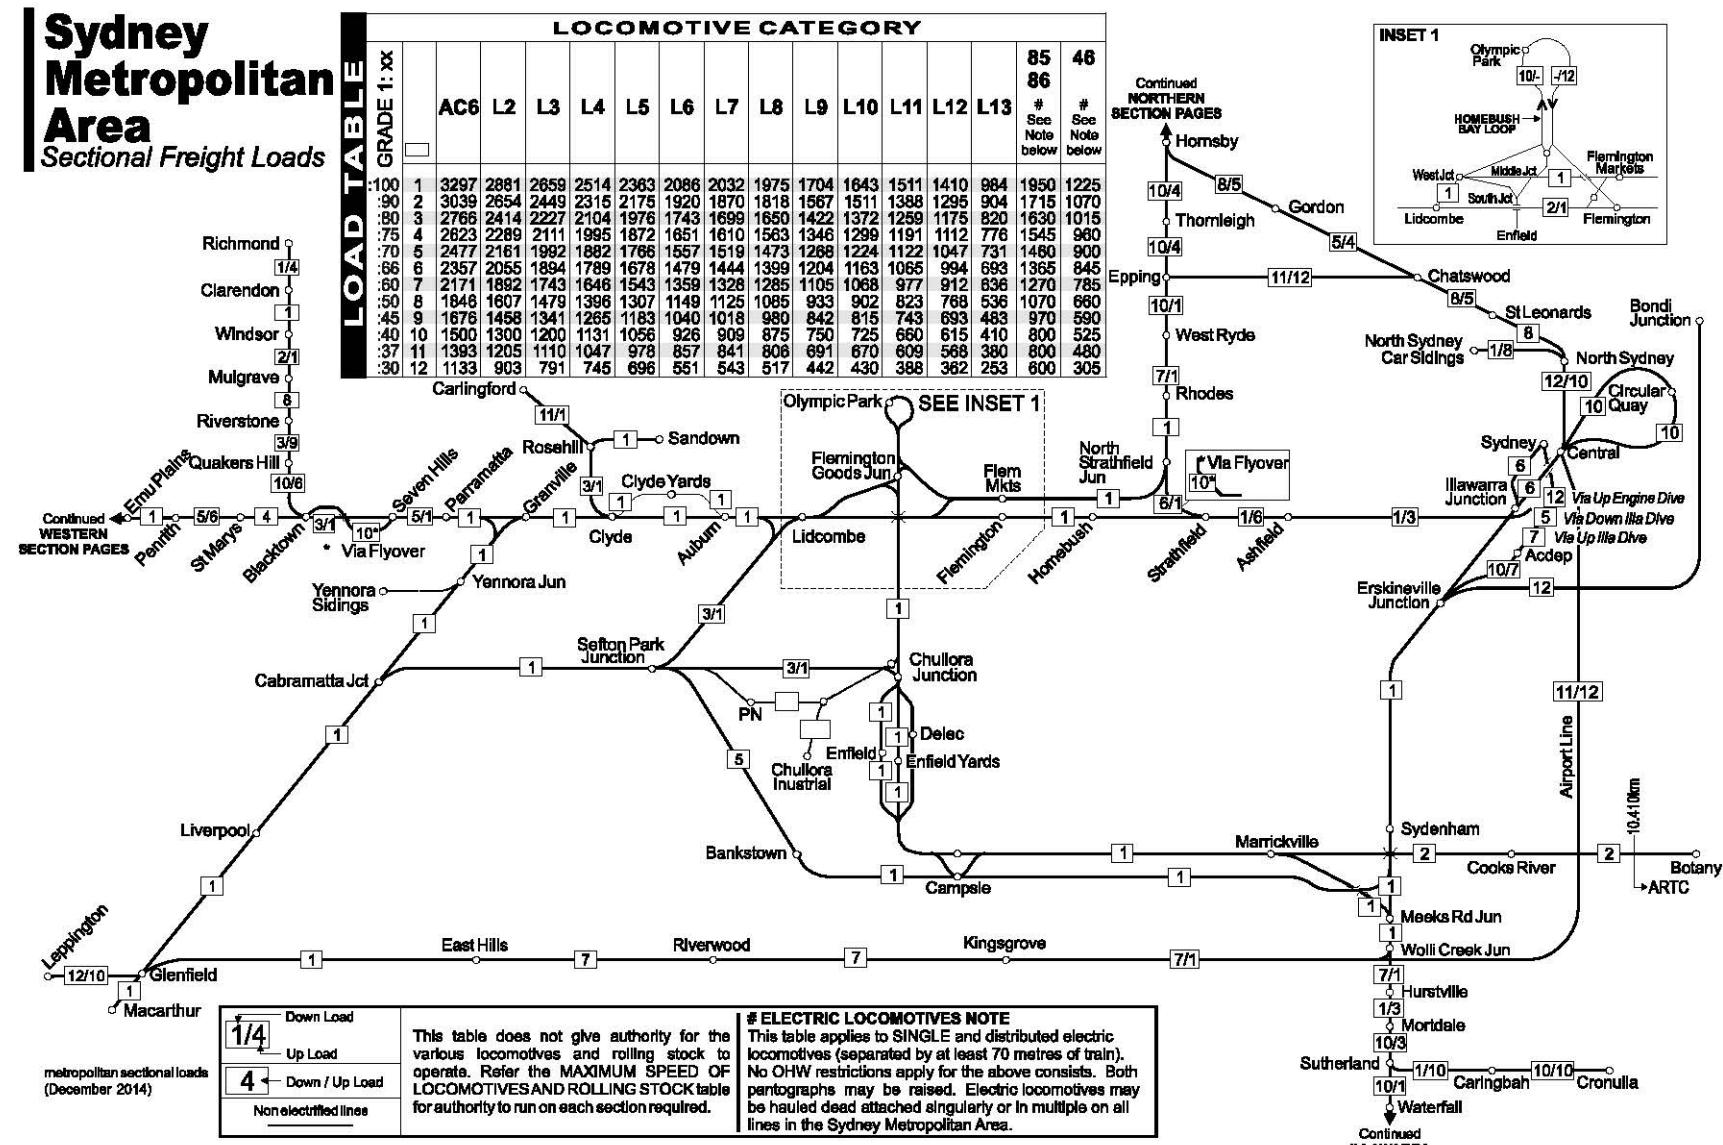

Notes for Maximum speed of locomotives and rolling stock - Sydney Metropolitan Area

- N/A Not allowed to run on this section under normal working conditions.
- ^ Numbered columns represent axle loadings. Column 1 heaviest to column 13 lightest.
- A The maximum speed for all non-stopping trains, for all underground platforms, is 10 km/h in the tunnel before the platform and 15 km/h through the platform.
- B The max speed for all locomotives in the Circular Quay area, outside of the platform, between the Harrington St and the Macquarie St portals is 25 km/h.
- C Heavy axle loads and unscrubbed diesel locomotives (i.e. diesel locomotives not fitted with approved exhaust conditioners) are only approved for restricted operation in the city underground as follows :-
(a) Locomotives designated in columns numbered 1 to 6 (Includes 86 class) above and freight vehicles heavier than 76 tonnes gross are not permitted to run through platforms at: (1) Wynyard station, Up and Down Shore, and (2) Town Hall station, Up and Down Shore and City Inner except in an emergency and only when issued with a current TOC waiver covering each movement.
(b) Unscrubbed diesel locomotives are also permitted to operate in the city underground but only when issued with a current TOC waiver covering each movement.
- D The following rolling stock is not allowed to run over the Flying Junctions between Redfern and Central in the Up direction:
Locomotives designated in columns numbered 1 to 6 above and freight vehicles heavier than 76 tonnes gross.
- E Not used.
- F Electric locomotives are allowed on the **UP NORTH FORK** between Meeks Road West Junction and Meeks Road Sydenham Junction **ONLY**.
- G 81/82/NR class locomotives and E/F class freight vehicles allowed between Sefton Park North Junction and Sefton Park East Junction at a max speed of 25 km/h.
- H Freight vehicles loaded greater than 20 tonnes axle load NOT PERMITTED, unless authorised by a TOC Waiver.
- I Freight vehicles loaded greater than 23 tonnes axle load NOT PERMITTED, unless authorised by a TOC Waiver.
- J Electrified between Rosehill & Electric train Stop sign located at location CC22+736 (Overhead Wire Structure)
- K Only locomotives fitted with vigilance control system are approved to operate outside shunting yards.
- L **Maximum load**
Freight trains shall not contain any freight vehicles with a **gross mass exceeding 73 tonnes**.
- Operational requirements**
Between Martin Place and Bondi Jct to conform to structure loading limits on the viaducts the following conditions shall be obeyed:
The only time that simultaneous movements are permitted on adjacent tracks over this section is when the freight trains are in the **empty** condition.
All trains when passing each other on the above section shall not exceed a **maximum speed of 15 km/h**.
- M Freight vehicles loaded greater than 20 tonnes axle load and unscrubbed diesel locomotives (i.e. diesel locomotives not fitted with approved exhaust conditioners) are NOT PERMITTED, unless authorised by a TOC Waiver.
- N 81 Class and 48 Class locomotives only.

Sydney Metropolitan Area - sectional freight loads

Freight Lines	Enfield Control Centre	Refer ARTC network control centre south (Junee)

This location is manned by a qualified employee for station duties, which includes switching in for timetabled movements through the interlocking or to meet operational requirements as per requests from the Train Controller.

Dangerous goods in the Sydney Underground

Version 15.0 December 2012

The following goods are totally banned from being carried by freight trains through the Sydney Underground lines (Central to North Sydney; City Inner and City Outer; Redfern to Bondi Junction; Central to Wollie Creek Junction), Chatswood to Epping:

CLASS 1	Explosives in any quantity which requires marking of freight containers.
CLASS 2.1	Flammable gas in bulk tankers
CLASS 2.3	Poison gas in any quantity which requires marking of freight containers
CLASS 3	Flammable liquids in bulk tanks where the hazchem code includes the letter E (this includes petrol tankers returning unpurged).

Tonnage signals

Certain signals listed herein are treated as **Tonnage Signals**, that is to say, in order to avoid the risk of trains over a certain tonnage being brought to a stand at signals where it would be difficult for them to restart, these tonnage signals shall not be passed by trains conveying loads in excess of 75% of the prescribed load (i.e. 75% of Full Sectional Load) unless the Tonnage signal is in the clear position (or by telephone instructions in the case of failure).

The following signals are to be treated as a Tonnage signal, in accordance with Sydney Trains Network Rule NSG 608 *Passing signal at STOP*.

	Kilometrage	Signal number	Section located
North	17.880	WR1	Meadowbank – West Ryde
	22.308	EG21 – Down Suburban	Eastwood – Epping
	22.308	EG23 – Down Main	Eastwood – Epping
	23.745	EG45 – Down Main	Epping – Cheltenham
	23.759	EG43 – Down Suburban	Epping – Cheltenham
	32.051	HY13	Normanhurst – Hornsby
Illawarra	26.025	SD71 DI Down Home & Starting	Sutherland
	26.055	SD69 DR Down starting Refuge to Down Main	Sutherland
West	17.506	ST420M Up Home	Up Main Lidcombe
	17.506	ST422S Up Home	Up Suburban Lidcombe

Bondi Junction – trains / vehicles less than 4 cars using diamond crossover

Version 15.0 December 2012

Whenever a train or vehicle less than 4 cars in length has to traverse the diamond crossing at Bondi Junction, through points 907 in the reverse position it shall be block worked in accordance with Sydney trains Network Rule NSY 512 *Manual block working between SY767 and SY783 or SY770 and ES6.48 signals*.

Trains or vehicles shorter than 4 cars in length may not reliably operate the track circuits.

Main South – DOWN schedules and running times

Section 17

Passenger Train Operating Conditions

17. Passenger train operating conditions

December 2014

Introduction

This section of the Train Operating Conditions Manual contains specific operating conditions for passenger trains which include Sydney Trains, NSW Trainlink, privately owned diesel railcars, heritage trains and locomotive hauled trains.

Sydney Trains and NSW Trainlink

As Sydney Trains and NSW Trainlink operate similar types of rolling stock, the following sections refer to both Sydney Trains and NSW Trainlink.

Designation of rolling stock

All rolling stock have been classified as **Narrow, Medium, Extended Medium or Wide gauge** rolling stock as outlined TOC Manual, General Instructions, Section 10 Locomotive and Rolling Stock Data.

In Table 3 and Table 4 - Maximum speed of Sydney Trains and NSW Trainlink rolling stock (pp 82-83) the various sections of track have designated **Narrow, Medium, Extended Medium or Wide gauge**.

Table 2 – Profile Track Gauge Groups and Speeds

PROFILE	# GROUP	MAX SPEED	DESIGN SPEED	AREA OF OPERATION
Narrow gauge rolling stock	1 & 6	115	115	may run on Narrow, Medium, Extended medium or Wide gauge track areas
Medium width gauge rolling stock	2	115	115	may run on Medium, Extended medium or Wide gauge track areas
Medium width gauge rolling stock	3	115	130	may run on Medium, Extended medium or Wide gauge track areas
Extended Medium stock gauge rolling stock	4	115	115	may only run on Extended medium or Wide gauge track areas or where authorised herein or other authority i.e. TOC Waiver
Wide gauge rolling stock	5	80	80	may only run on Wide gauge track areas with a further restriction of 20km/hr through ALL PLATFORMS (unless otherwise specified in TOC Waiver authority)

For group categories, refer to General Instructions, Section 10 Locomotive and Rolling Stock Data.

For trains requiring to run in areas outside their rolling stock boundaries (e.g. rolling stock transfers, special working etc.), permission shall be obtained from Lead Engineer Rolling Stock, Asset Standards Authority and all special requirements necessary for the movement are to be included on a Special Train Notice or 'Tables' telegram. The following table includes certain authorised working for special movements (e.g. movement of nominated Extended Medium gauge rolling stock Sydney - Broadmeadow)

Speed signs - maximum kilometres per hour

Speed signs indicate the maximum speed permitted between a speed sign and the next in advance. Drivers shall make sure that the front of the train passes a sign at or below the speed given by the sign.

If speed signs allow an increase in speed, Drivers shall not increase speed until the rear of the train has passed the speed sign. (Sydney Trains Network Rule NSG 604 *Indicators and signs*.)

The maximum speed through the curved portion of the turnout is **25 km/h** unless otherwise shown. An 'X' speed sign applies to crossovers and turnouts, e.g. X30.

A white background speed sign with the letters "MU" alongside the numerals, by itself or under a yellow background speed sign, applies to XPT, Xplorer, Endeavour, Hunter trains and Multiple Unit trains (Sydney Trains Network Rule NSG 604 *Indicators and signs*.)

Speed signs - Endeavour / Hunter / Xplorer Trains

Endeavour / Hunter / Xplorer trains are to run to normal speed signs (black numbers on a yellow background). Where XPT or High speed signs are provided (black numbers on a white background), Endeavour / Hunter trains will run to these speed signs up to a maximum speed of 145 km/h.

Maximum speed of Sydney Trains and NSW Trainlink rolling stock

Table 3 and Table 4 - Maximum speed of Sydney Trains and NSW Trainlink rolling stock (pp 82-83) show the maximum speed of Sydney Trains and NSW Trainlink rolling stock over the various sections of lines. These speeds are subject to permanent speed signs and temporary speeds that may be in force.

The approval applies to Down and Up directions unless specified.

Where speeds are shown in the following table, these are to be taken as authority for these trains to operate on the designated section of line.

Where the letters N/A are shown, trains are not permitted to travel over that section of line under normal conditions. When the letters N/A are shown and a train is required to travel over that section of line, permission shall be obtained from Lead Engineer Rolling Stock, Asset Standards Authority before the movement commences

Table 3 Maximum speed of Sydney Trains and NSW Trainlink rolling stock

⁺ See Sydney Metropolitan area - operation of wide gauge rolling stock (page 84) re operation of Wide Gauge rolling stock in the Metropolitan area.

⁺⁺ Refer to General Instructions, Section General Instructions, Section 10 Locomotive and Rolling Stock Data for group categories

[%] Hunter cars not permitted beyond Dunmore.

^{*} This section of track may be 'Unavailable for electric traction'. Refer to the 1500 volt sectioning diagrams for the current status.

Superseded by
TOC 2 V30

■ Local area working - special instructions

When a number appears in the *Notes* column of the Table 3, or Table 4 (pp 82-83), the pages referring to the specific locality should be examined for any special instructions or conditions that may be in force for the relevant section of line.

Sydney Metropolitan area - operation of wide gauge rolling stock

Due to a reduction of platform clearances, all trains containing **WIDE WIDTH (Group 5)** rolling stock as designated in *General Instructions, Section 10 Locomotive and Rolling Stock Data* shall reduce speed to **20 km/h through all platforms** and not accelerate until the last car has left the platform.

Specific localities

1 - City Circle

1a - Non stopping trains at City Circle stations.

Non stopping trains are to reduce to a speed not exceeding 10 km/h in the tunnel before the platform and then proceed through the platform at a speed not exceeding 15 km/hr. Station staff are to announce that passengers are to stand clear as the next train will not stop at that station.

3 - Clyde to Carlingford

3a - Maximum length of stopping trains.

Due to short platforms between Clyde and Carlingford only four car or less suburban trains may operate on stopping services.

Rosehill Racecourse platform can accommodate eight car trains.

6 - Chatswood to Epping

6b – Operational restrictions for Sydney Trains rolling stock – Chatswood to Epping line.

All through services, which do not reverse at Epping or Chatswood, may operate with up to 25% of traction motors cut out.

* H sets that, after entering ECRL, require up to 50% of traction motors to be cut out are allowed, upon reaching this condition, to make only one (1) station stop within ECRL then are only allowed to continue with passengers non-stop to any station no more than 10 km before such trains shall be removed from service (refer OMET 351).

\$ T Sets that have arrived at either Epping or Chatswood after just travelling through the ECRL tunnel are not to be turned back unless passengers are removed from the train for the return trip through the tunnel. T sets may turn back and carry passengers providing the layover time at Chatswood or Epping is not less than 35 minutes.

A, C, K, S, T, V set cars are not to be used for Epping – Chatswood shuttle services. These sets may operate unrestricted on through services, with passengers on-board, and stopping at any stations, whether diverted or timetabled.

- @ Extended shuttle runs between Hornsby – Epping – Chatswood and return are only allowed to be operated by **A, H, K, M S or T** sets.

The following operating restrictions apply to this working:

- All traction motors shall be operative on **A, K and S** sets before entering the tunnel. If one of these types of trains requires no more than 25 % of its motors to be cut-out while in the ECRL tunnel then it may complete its journey through the tunnel but not re-enter for further shuttle service.
- T sets operating on the Hornsby – Epping – Chatswood shuttle shall have a minimum layover time (time between arriving and departing) at Chatswood of 35 minutes.

7 - Strathfield to Newcastle

7a - Operation of Medium Width rolling stock between Sydney and the Newcastle area.

(The following conditions apply to Up and Down directions)

Medium width rolling stock may operate under normal conditions between Sydney and Newcastle (both directions) except as shown below:

1. The instructions contained in the Sydney Trains Network Local Appendices *NLA 312 Gosford* regarding the operation of Medium Width rolling stock in Gosford interlocking will apply.
2. The cars may pass upgrading operations and associated ballast trains at speeds not exceeding 10km/hr provided that the train is safely piloted past ballast trains and machines in the non-operable position and stationary, and all staff are standing well clear.
3. In the event the cars will have to be locomotive hauled and a 48/80/81/86 class locomotive is used, the locomotive can be directly coupled to the leading car. (Tangara trains use special transition couplers)
Prior to coupling locomotive, the brake pipe pressure on the locomotive shall be reduced to 425Kpa (60psi) and automatic brake applied and released on the locomotive a number of times.
4. If the cars are being locomotive hauled, the crew shall be made aware of the above mentioned conditions.
5. The Train Controller shall inform the signaller at Gosford when additional trains consisting of medium width electric suburban rolling stock are required to operate or out-of-course running occurs in order to enable the signaller at Gosford to take the necessary precautions to prevent trains consisting of medium width electric suburban rolling stock passing or being passed on an adjacent line between 81.027km and 82.174 km by a similar train.

7b - Transfer of Extended Medium Width rolling stock between Sydney and the Newcastle area destinations.

(The following conditions apply to Up and Down directions)

Approval for the restricted movement of limited *extended medium width* suburban rolling stock outside the Wide Electric area from Cowan to Broadmeadow is given subject to the following conditions:

1. Approval applies to rolling stock with a maximum width of *3077mm ONLY* as listed in Table 3, or Table 4 (pp 82-83).
2. Approval applies to the area Cowan to Broadmeadow and Goninans Workshops only.
3. Approval applies for the purpose of transferring double deck suburban cars for the purpose of refurbishment or major repair only.

- Superseded by**
- TOC 2 V3.0**
4. Normal track speed is permitted on all track, platforms and tunnels with the exception that a reduced speed of **30 km/h** is required through the following platforms in both the Down and Up directions:
Gosford, Wyong, Fassifern, Cardiff, and Broadmeadow.
 5. All restrictions applying to the movement of Medium Width rolling stock in the area of Gosford Yard (as outlined in the Sydney Trains Network Local Appendices *NLA 312 Gosford* shall apply to these movements.
 6. The Extended Medium width Electric rolling stock as nominated in Table 3, or Table 4 (pp 82-83) below may pass or be passed by other passenger trains, freight trains, locomotives or other rolling stock to a maximum width of 3077mm wide travelling in the same or opposite directions, except as nominated in clause 5.
 7. If the movement consists of extended medium and medium width cars, the above instructions will apply.
 8. The extended medium width double deck suburban cars may pass upgrading operations and associated ballast trains at speeds not exceeding 10km/hr provided that the train is safely piloted past ballast trains and machines in the non-operable position and stationary, and all staff are standing well clear.
 9. Authority is given for the nominated rolling stock to pass the notice board 'WIDE GAUGE ROLLING STOCK MUST NOT PASS THIS POINT' located at Signal C19DM or C21UM at Cowan (Kilometrage 48.969km)
 10. A portable headlight shall be fitted to the leading car in accordance with *NTR 406 Using train lights*.

Table 1:

For the complete list of 3077mm wide Suburban electric rolling stock approved to operate between Cowan and Goninans Broadmeadow under the conditions outlined above, refer to the **General Instructions, Section 10 Locomotive and Rolling Stock Data Group 4 Extended Medium Width Cars.**

NOTE: The above approval **does not apply** to **Tulloch type trailers**.

10 - Erskineville to Bondi Junction

10a – Bondi Junction – Block working of trains less than 4 cars in length.

Whenever a train or vehicle has to traverse the diamond crossing at Bondi Junction through 908/912 or 911/907 points in the reverse position and if the train or vehicle is less than 4 cars in length, it shall be block worked in accordance with Sydney Trains Network Rule *NSY 512 Manual block working* between SY767 and SY783 signals or SY770 and ES6.48 signals respectively.

Trains or vehicles shorter than 4 cars in length may not reliably operate the track circuits.

12 - Central to Wollie Creek (Airport Line)

12a – Restriction of locomotive hauled services and non electric powered vehicles.

Under normal working conditions, diesel passenger services and non – electric powered vehicles are not permitted to operate on the Airport line.

Notice boards inscribed: *Drivers of locomotive hauled services and non-electric powered vehicles proceeding to the Airport line must not pass this point until authorised by the signaller.*

Refer to Sydney Trains Network Local Appendix *NLA 108 Central - Sydenham (via Green Square)* for further information.

14 - Metropolitan freight lines

14a - Restrictions for Medium, Extended Medium and Wide gauge trains at Meeks Road junction.

At Meeks Road junction trains of Medium, Extended Medium or Wide rolling stock outline may occupy either the Up Goods between 747 points and 774 points (West junction) or Down Goods between 746 catch points and 773 points (West junction). Only trains of Narrow rolling stock outline are allowed on the adjacent track.

Signaller at Sydenham Signal Control Centre is to ensure the above instructions are carried out.
